DETAILED ACTION

REASONS FOR ALLOWANCE

1. Claims 2, 3, 8-10, 13, 14 and 20-22 will be allowed.
2. The following is an examiner's statement of reasons for allowance:

The prior art of record does not provide for nor suggests providing for as follows:

A method for routing messages from a source node (S) to a destination node in a dynamic network, said source node including a routing table, each row in the routing table representing a possible destination node (D) for a data message transmitted from the source node (S), and each row in the routing table including one probability value $p(k,D)$ for each neighbor node (k) of the source node (S);

The probability values of using a specific neighbor node (k) of the source node (S) for transmitting data from the source node (S) to the destination node (D) are updated according to the following expression:

$$\frac{p(k, D)(old) + \delta}{1 + \delta}$$

where δ

represents the measured quality of a path through the node k, and $p(k,D)(old)$ represents the old probability value amount of using the node (k) for transmitting data from the source node (S) to the destination node (D), and the remaining probability values in the routing table are adjusted in such a way that all the probability values in each row of the routing table sum to one; and

At the detection of a gain of a new neighbor node (j), for both the new neighbor node (j) and the source node (S), computing one route quality rating ($RQR(D,j)$ and $RQR(D,S)$) for each possible destination node (D), based on the maximum probability value and minimum probability value for each destination node (D), and for all possible destination nodes (D), computing a new probability value for the new neighbor node based on the route quality rating for the neighbor node (j) and the source node (S) and the number of its associated neighbor nodes.

The closest prior art (Toh Patent No. 5,987,011) discloses as follows:

A system and method for measuring the stability of the communication links between neighboring mobile hosts using an associativity based characteristic and selecting a communication route through the network from the source mobile host to the destination mobile host based on the stability of the communication links; and

The associativity characteristic is measured by each mobile host periodically transmitting and receiving identifier beacon and updating the status of its corresponding links.

For these reasons, in conjunction with the other limitations of the independent claim, puts this case in condition for allowance.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to JEONG S. PARK whose telephone number is (571)270-1597. The examiner can normally be reached on Monday through Friday 7:00 - 3:30 EST.
